Customer Reviews

Review from previous edition: "*****" - Essential for the bookshelf." I--Occupational Medicine May 08"With contributions from the leading lights in the field, this is exactly what it says it is. The foreword is written by national director for Health at Work, Carol Black, who describes this handbook as an authoritative resource; it is indeed." I--Nursing Standard March 08"Content and presentation are excellent throughout, with an unprecedented amount of carefully graded, latest updated information to find and use immediately in every kind of urgent need, whether for immediate hands-on usage or training/testing situations. This handbook is essential for serious students of

occupational health as well as those already responsible for workplace life and health at all and any levels." I--RoSPA Occupational Safety and Health Journal Feb 08"Oxford Handbooks series seems to have succeeded again; this book is comprehensive in coverage of a range of areas in occupational health, and has ready references for most topics. Those working in clinical OH practice would certainly benefit from having this book available in their clinics."--Occupational Health Review September/October 2007"...this book is a fine addition to the occupational physician's library; they may need to keep it chained because there will be many members of the occupational health team who will want to borrow it" --Jean Ross, sciencedirect.com July 2008

After completing her undergraduate training at Nottingham University Medical School, Julia Smedley subsequently spent several years in hospital medical specialties before embarking on higher specialist training in occupational medicine (a joint clinical/academic post at Southampton University Hospitals NHS Trust and the Medical Research Council Environmental Epidemiology Unit, University of Southampton). She is currently the head of a large NHS occupational health department that also provides services to a range of local and global industries. Whilst she is primarily a practical clinician and service director, she has always maintained a strong interest in research and evidence-based practice in occupational medicine. Finlay Dick is a Senior Lecturer in Occupational Medicine at Aberdeen University, Honorary Consultant Occupational Physician to NHS Grampian and is the course co-ordinator for the MSc in Occupational Medicine at the University of Aberdeen. He has worked in occupational medicine for 15 years in a number of sectors including the oil industry, shipping, local authority, and healthcare sectors. Steve Sadhra has published over 50 book chapters, international reports and peer-reviewed publications in the field of Occupational Health. He has over 15 years experience in teaching occupational physicians, nurses and occupational hygienists and engineers and currently undertakes National and International Consultancy work in occupational health for over 30 organisations throughout the UK.

I've just got this book. Complete topic that include any occupational medicine aspects. But it served in brief, so it's recommended as an Reminder for expert/profesionals or as a First-Guidance for starter who interest in occupational medicine. Recommended book.... !

Great Handbook!
