Morphological Mouse Phenotyping: Anatomy, Histology And Imaging

Synopsis

Morphological Mouse Phenotyping: Anatomy, Histology and Imaging is an atlas of explanatory diagrams and text that guides the reader through normal mouse anatomy, histology, and imaging. The book is targeted for mouse researchers and veterinarian and human pathologists, and presents a complete, integrative description of normal mouse morphology. Disease animal models are fundamental in research to improve human health. The success of using genetically engineered mice to evaluate molecular disease hypotheses has encouraged the development of massive global projects, making the mouse the most used animal disease model. Laboratory mouse populations are straining the housing capacity of pharmaceutical and biotechnology companies, as well as public research institutions. However, the scientific community lacks sufficient expertise in morphological phenotyping to effectively characterize and validate these animal models. The mouse displays fundamental morphological similarities to humans; however, a mouse is not a man. Features more than 2,200 original images showing the anatomy, histology, and cellular structure of mouse organsIncludes images specifically produced for this book in the Mouse Imaging Platform (Center for Animal Biotechnology and Gene Therapy, Universitat AutÃƒÂnoma de Barcelona)Offers an integrative vision of mouse morphology using correlative X-ray, computed tomography, magnetic resonance, and ultrasound images Employs classical anatomical techniques such as conventional dissection, skeletal preparations, vascular injections, and histological, immunohistochemical, and electron microscopy techniques to characterize mouse morphology

Book Information

Hardcover: 600 pages

Publisher: Academic Press; 1 edition (February 10, 2017)

Language: English

ISBN-10: 0128129727

ISBN-13: 978-0128129722

Product Dimensions: 12.3 x 1.5 x 9.4 inches

Shipping Weight: 4.9 pounds (View shipping rates and policies)
