## Customer Reviews

Grade 6-10?This title begins with two-page overviews of the history of astronomy, early instruments used in both astronomy and navigation, and astrology. Double-page spreads on optical and radio telescopes, observatories, spectroscopy, the solar system, the sun and moon, and each planet follow. The book concludes with a discussion of meteors and cosmology. The illustrations consist of small, full-color reproductions of paintings and full-color drawings and diagrams; all have captions that often contain more information than the introductory paragraph they surround. An excellent introduction to the topic.?Margaret M. All DK books are the bomb

Excellent book. I have not been able to find a DK Eyewitness book that I did not like. Reading one is like taking a trip to the museum or planetarium and not leaving your couch. High quality stuff.

A very good introduction for a good reader 2nd-5th grade. Interesting illustrations good to read aloud. Older children could read it by themselves. I choose to read segments to my granddaughter. She is seven.

Purchased this as a gift for my son. I love the historical content and all of the illustrations. I believe it will be a great read for someone who isn't very interested in reading, yet wants to have a good basic reference handy on a subject they love. I personally read through the book before wrapping and was fascinated. Great book!

SUPER pictures! This book is a load of information and great for the home library.

Great book. Using Astronomy as a "elective" in homeschooling. Fast. Great condition book with lots of information.

Good book

We gave this book to a kid who loves to learn. He really enjoyed the book. If you know someone that has a lot of those "But why" questions, I think he/she will find this fascinating.
