Customer Reviews

"The fifth edition of Tumors in Domestic Animals has some substantial changes from the previous edition, the most immediately striking of which is the inclusion of color, which greatly adds to the illustrative power of the images. This edition contains several new chapters and updates to other chapters. Particularly noteworthy are the new chapters on trimming tissue specimens for submission and immunohistochemistry and updates to chapter 1, the section on lymphoma, and the diagnostic and prognostic algorithms in the appendices. Overall, the information contained in this book reflects the substantial progress made in veterinary oncology during the 15 years since the previous edition was released"..... "Overall, this book is reasonably priced and should be in the library of anyone with an interest in veterinary pathology or clinical oncology." (Reviewed by Claire Cannon, BVSc, DACVIM, University of Minnesota 15th June 2017 AVMA)

Tumors in Domestic Animals, Fifth Edition builds on its reputation as the most comprehensive and authoritative reference on veterinary tumor pathology in common domestic animals, with a focus on diagnostics, the biologic behavior of animal cancers, and oncogenesis. Updated to include current advances in research and diagnostics, the Fifth Edition also contains hundreds of new full-color images to aid in identification. New sections on relevant clinical pathology and oncology add a new depth of knowledge to this highly acclaimed textbook. Logically organized for ease of use, the chapters divide the subject by body system with an overview of all tumors in each system, allowing readers to quickly locate relevant information. Tumors in Domestic Animals is an essential reference for veterinary oncologists, pathologists, cancer biologists, clinicians, residents, and students interested in veterinary oncology.
