Synopsis

Are You LOSING your hair or is it just THINNING?? Learn more about hair loss with this short and simple guide! Today only, get this bestseller for just \$0.99. Regularly priced at \$4.99. Read on your PC, Mac, smart phone, tablet or Kindle device. It can be quite confusing to determine if you are losing excessive hair or if the actual diameter of your hair shafts are gradually reducing - or even if both are occurring at the same time. While both result in volume reduction, hair-diameter thinning occurs over a long period of time, while excessive hair shedding can result in more rapid reduction of volume if the daily loss of hair is substantial. The sudden, diffuse loss of hair from all over the scalp is called *telogen effluvium* and can be the result of improper nutrition, stress, hormonal upsets and pregnancy. A reduction in your hair's diameter can also be influenced by these things, but is most often due to genetics, follicle sensitivity to hormones, and to age. However, the most common cause of hair loss we see in women are anaemia and ferritin deficiency. Furthermore, while many people associate finer hair with ageing, women as young as 18 can experience genetic thinning, triggered and/or exacerbated by conditions such as PCOS, and/or simply a strong genetic predisposition. Eating disorders can also cause hair fall in women and men of any age. As the causes of hair loss can be quite wide-ranging, and are also often triggered by more than one thing, it is important to see a trichologist if you are concerned with hair loss. So many variables can play a role in the health of your hair, and often the stress of closely inspecting your own hair on a daily basis for signs of problems can exacerbate the condition. If you think you are losing your hair, or that it is thinning, read this book to get an overview of this problem. Much can be done to stop excessive hair loss and also slow, and even stop or reverse, the process of hormonal or metabolic-related hair thinning. This book was designed as an overview for people who know little about this problem. It will tell you the basics and help you choose the appropriate course of action.

Whether you are hesitant about throwing down a huge amount of cash or about subjecting your scalp to some potentially harsh chemical treatments, the following are just a handful of home remedies that you can test out first: The juice from the Aloe Vera plant is great for soothing dry or irritated scalps, which sometimes cause hair loss, since it restores healthy pH levels. While there are some commercially made shampoos that are supposedly infused with Aloe Vera extracts, using pure Aloe Vera juice straight from the stalk is a cheaper and more effective way to exploit this plant's hair rejuvenation capabilities.

Every hair follicle has its own life cycle, usually influenced by several factors including age and medical condition, thus grabbed this book to learn a more about this as I was not sure of the reason of my hair loss. This book contains proven steps and strategies on how to prevent and cure

hair loss. I got required useful information about hair loss and how to prevent it from happening. Thanks a ton to the author.

This was a good book but it was too short and it seemed overly specific in some areas yet general in others. I could tell this person knew what he was talking about but didn't really understand how to write and do it effectively.

This is a very very basic book which provides little 'new' information. Most of the content can be research on google in a few seconds. I was hoping for a lot of useful compiled information to save me researching it myself.
