My fiancÃ© got this for her courses at college. I can't really review this on her behalf, because I didn't read/use this book. But hey, she passed her course so this must work!

If you are a project manager looking to improve on your craft this won't help. Overloaded with general and generic advice. I felt as if I was reading a cover bands version of the PMBOK. If you are a student and paying for your own education, I'm sorry the system has failed you. The cursory overview this book provides isn't worth the amount of cash you are about to spend on it. A decent hour to two hour lecture could better prepare you for the real world.

Required book for college class. Good information

Very information textbook

The authors of this book claim alignment / correlation to the Project Management Body of Knowledge Guide (PMBOK) in reality, EVM sections do not align with current terminology used by the PMI and other reference material. Had this textbook not been required for a class, I would have returned it ASAP when it was apparent that this book needs serious updates.

I was required to have this particular book for a course I am taking. This is the single most expensive textbook I have ever purchased for something so thin. If there were a ton of pages, it

would not have been so bad...but again I am ripped off on the price. The content is inline with current beliefs and thoughts about the subject matter, it is well written, but if you do not have College level reading and comprehension, this is not the book for you. The book is very detailed and the end of chapter summaries again are very detailed-but you need to actually read the chapter to know what the summary is about.

The book was well written and well constructed. The 'Reinforce Your Learning' section in the margin was particularly helpful during the learning process. It has lines to write in which I liked. It also captured the book verbatim so no guess work, just the correct answer every time.

Just a textbook. Hasn't changed much over the years from version to version and very overpriced but also the standard for college project management classes so you are kind of stuck.
